

CONFERENCE INVITATION

How shall we develop, maintain & manage the critical software intensive systems of tomorrow?

We are seeing an increasing amount of complex automated and networked software and computing systems in all industry domains - from cars to medical equipment – forming smart cities/ transportation / manufacturing etc. They promise new capabilities for a sustainable future. However, these systems will also represent unprecedented complexity with severe consequences if the services are not delivered as intended. This causes a need for new methodologies and engineering guidelines to ensure system trustworthiness and life-cycle efficiency.

This sets the scene for ICES 10-year anniversary conference.

Sept 27th - Managing eco-systems for innovation

Sept. 28th - Creating Complex and Trustworthy Systems

Welcome to KTH in September!!

ICES, the KTH-industry network center within software intensive embedded and cyber-physical systems was inaugurated in 2008 and has over the years grown to about 30 industrial members and established partnerships with several other regional and international networks.
